Integrated Technology

At WISH, technology is integrated throughout the curriculum through co-teaching with our expert partners at PlanetBravo. General education teachers partner with the PlanetBravo experts each week to develop skills that can be used with all students throughout the week in every subject area. Instruction focuses on basic operations and concepts, social, ethical, and human issues such as copyright and fair use issues, digital citizenship, and so many exciting tools!

Instruction includes:

- Digital Citizenship
- Technology Productivity Tools
- Coding
- Website Development
- Creating VLOGs and BLOGs
- Video game design and so much more!

All teachers have a myriad of tools to support technology integration based on their curricular needs. These may include SmartBoards, iPads, document cameras, laptops, Apple TVs, robots, drones, and more, depending on the age, grade level, and content being covered. In addition, all WISH students are provided a laptop to ensure full access to educational software, cloud-based computing opportunities, and to optimize instructional activities.
